ESDCAN03-2BM3Y	

Product summary			
Order code	ESDCAN03-2BM3Y		

Features

- AEC-Q101 qualified
- Bidirectional dual-line ESD and EOS protection
- Trigger voltage, V_{TRIG} min = 28 V and low clamping factor V_{CL} / V_{TRIG}
- QFN-3L 1.1 x 1.0 x 0.55 package also called DFN1110
- Max pulse current to 3.3 A (8/20 μs)
- Low leakage current
- ECOPACK2 ROHS compliant component

Complies with the following standards

- J-STD-020 MSL level 1 and UL94, V0
- IPC7531 footprint and JEDEC registered package
- ISO 16750-2 (Jump start and reversed battery tests)
- ISO 10605 / IEC 61000-4-2- C = 150 pF, R = 330 Ω, exceeds level 4:
 - ±15 kV (contact discharge)
 - ±30 kV (air discharge)
- ISO 10605 C = 330 pF, R = 2 kΩ:
 - ±30 kV (contact and air discharge)
 - ISO 10605 C = 330 pF, R = 330 Ω:
 - ±12 kV (contact discharge)
 - ±30 kV (air discharge)
- ISO 7637-3:
 - Pulse 3a/3b: +/-150 V
 - Pulse 2a: +/- 85 V

Applications

Automotive controller area network where an electrostatic discharge or another transient surge may damage the CAN transceiver or an integrated circuit (IC) featuring a CAN PHY. This product is compliant with most of automotive interfaces.

Description

This dual-line CAN transceiver protection device (TVS) protects both CAN H and CAN L signals of automotive CAN PHY against ISO 7637-3 transients and ESD (electrostatic discharge).

ESDCAN03-2BM3Y complies with all the physical layer constraints (jump start, reverse polarity, ...) without compromising the low clamping voltage for an efficient CAN bus protection (controller area network) or LIN bus protection (local interconnect network).

The low line capacitance makes it compliant with CAN-FD and high speed buses like FlexRay, USB, and even the future CAN XL.

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

3 Recommendation on PCB assembly

3.1 Footprint

57

SMD footprint design is recommended.

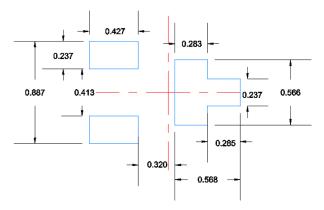

Figure 22. Recommended footprint in mm

3.2 Stencil opening design

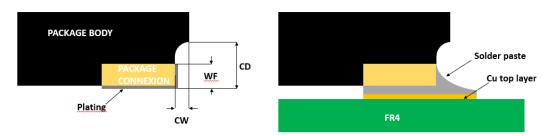

- 1. Reference design
 - a. Stencil opening thickness: 100 μ m / 4 mils
 - b. I/O (pin 1 and pin 2) pads stencil aperture ratio: 90%
 - c. GND (pin 3) pad stencil aperture ratio: 50%

Figure 23. Recommended stencil window position in mm

3.3 Wettable flank profile

Figure 24. Wettable flank profile

3.4 Solder paste

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component movement during high speed.
- 4. Use solder paste with fine particles: powder particle size is 20-38 µm.

3.5 Placement

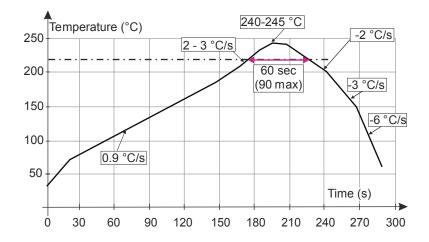

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- 3. Standard tolerance of ±0.05 mm is recommended.
- 4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- 5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.6 PCB design preference

- 1. To control the solder paste amount, the closed via is recommended instead of open vias.
- 2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

3.7 Reflow profile

Figure 25. ST ECOPACK recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
